

EXP.NO: 3	Emerging Trends in Low-Code Development
------------------	--

Aim:

To study the latest trends in low-code development and understand how they support the development of a **Student Admission Enquiry Management System**.

Emerging Trends:

Low-code application development is becoming increasingly popular because it enables faster and simpler software development. Modern low-code platforms use visual development tools and AI-assisted features to simplify the creation of forms, reports, and workflows. Cloud-based technology allows users to build, manage, and access applications from anywhere.

Low-code platforms also support mobile-friendly application designs, workflow automation, real-time data management, and integration with external services such as email and notification systems. Built-in analytics and reporting features help educational institutions monitor student enquiries, admission details, application status, and other important information.

These emerging trends improve productivity, reduce development time, and simplify application development. Therefore, platforms such as Zoho Creator provide an effective solution for developing a **Student Admission Enquiry Management System**.

Observation:

- Low-code platforms reduce application development time.
- Visual drag-and-drop tools simplify form and application design.
- Cloud-based access enables applications to be accessed from anywhere.
- Workflow automation improves the management of student admission enquiries.
- Mobile compatibility provides a better user experience.

Conclusion:

The experiment helped in understanding the Zoho Creator interface and creating a basic **Student Admission Enquiry Management System**. The platform made it easy to design and develop an admission enquiry form using drag-and-drop components with minimal coding.
